Glossary of Defined Terms

| Term | Definition |
|-----------------|---|
| ACL | Allowance for credit losses |
| AD and CL | Acquisition and development and commercial land |
| AFS AFS | Available-for-sale |
| Agency MBS | Mortgage-backed securities issued by a U.S. government agency or GSE |
| ALLL | Allowance for loan and lease losses |
| AOCI | Accumulated other comprehensive income (loss) |
| BOLI | Bank-owned life insurance |
| Basel III Rules | Rules issued by the FRB, OCC, and FDIC on capital adequacy and liquidity requirements in the U.S for banking organizations. |
| BB&T | BB&T Corporation and subsidiaries (changed to "Truist Financial Corporation" effective with the Merger) |
| BCBS | Basel Committee on Banking Supervision |
| BHC | Bank holding company |
| CAP | Capital Adequacy Process |
| CARES Act | The Coronavirus Aid, Relief, and Economic Security Act |
| CCAR | Comprehensive Capital Analysis and Review |
| CCB | Capital Conservation Buffer |
| CCP | Central clearing party |
| CD | Certificate of deposit |
| CDS | Credit default swaps |
| CECL | Current expected credit loss |
| CEIO | Credit-enhancing interest-only strip |
| CET1 | Common equity tier 1 |
| Company | Truist Financial Corporation and subsidiaries (interchangeable with "Truist" below) |
| COVID-19 | Coronavirus disease 2019 |
| CP | Construction and permanent |
| CRA | Community Reinvestment Act of 1977 |
| CRE | Commercial real estate |
| CSA | Credit support annex |
| CVA | Credit valuation adjustment |
| Dodd-Frank Act | Dodd-Frank Wall Street Reform and Consumer Protection Act |
| DVA | Debit valuation adjustment |
| FDIC | Federal Deposit Insurance Corporation |
| FFIEC | Federal Financial Institutions Examination Council |
| FHC | Financial Holding Company |
| FRB | Board of Governors of the Federal Reserve System |
| GAAP | Accounting principles generally accepted in the United States of America |
| GSE | U.S. government-sponsored enterprise |
| HTM | Held-to-maturity |
| HVCRE | High volatility commercial real estate |
| ISDA | International Swaps and Derivatives Association, Inc. |
| LCR | Liquidity Coverage Ratio |
| LHFI | Loans and leases held for investment |
| LHFS | Loans held for sale |
| LIBOR | London Interbank Offered Rate |
| MBS | Mortgage-backed securities |
| MD&A | Management's Discussion and Analysis |
| MDB | Multilateral development bank |
| Merger | Merger of BB&T and SunTrust effective December 6, 2019 |
| NCCOB | North Carolina Office of the Commissioner of Banks |
| NPA | Nonperforming asset |
| NSFR | Net stable funding ratio |
| 000 | Office of the Comptroller of the Currency |
| OTC | Over-the-counter |
| Parent Company | Truist Financial Corporation, the parent company of Truist Bank and other subsidiaries |
| PSE | Public sector entity |

Pillar 3 Regulatory Capital Disclosures Truist Financial Corporation September 30, 2023

| Term | Definition |
|-----------------|--|
| PFE | Potential future exposure |
| PPP | Paycheck Protection Program |
| PSE | Public sector entity |
| Rule | Basel III Final Rule |
| RWA | Risk-weighted assets |
| SCB | Stress Capital Buffer |
| SEC | Securities and Exchange Commission |
| SPE | Special purpose entity |
| SunTrust | SunTrust Banks, Inc. |
| SSFA | Simplified Supervisory Formula Approach |
| Tailoring Rules | Final rules changing the applicability thresholds for regulatory capital and liquidity requirements, issued by the OCC, FRB, and FDIC, together with the final rules changing the applicability thresholds for enhanced prudential standards issued by the FRB |
| TDR | Troubled debt restructuring |
| Truist | Truist Financial Corporation and subsidiaries |
| Truist Bank | Truist Bank |
| U.S. | United States of America |
| U.S. Treasury | United States Department of the Treasury |

Introduction

Truist is a FHC and conducts its business operations through its bank subsidiary, Truist Bank, and other non-bank subsidiaries. Truist is a purpose-driven financial services company committed to inspiring and building better lives and communities. Truist has leading market share in many high-growth markets in the country, and offers a wide range of products and services through our retail and small business banking, commercial banking, corporate and investment banking, insurance, wealth management, and specialized lending businesses. Headquartered in Charlotte, North Carolina, Truist is a top 10 U.S. commercial bank.

Truist Bank is a state non-member bank and is supervised by the FDIC and NCCOB, while Truist is supervised by the FRB. Truist's nonbank subsidiaries are regulated and supervised by various other regulatory bodies, including the Securities and Exchange Commission and the Financial Industry Regulatory Authority.

Recent Events

Banking agencies have proposed certain actions described below. We continue to evaluate these proposals and the potential impacts, if adopted as proposed, on the Company and Truist Bank.

In July 2023, the U.S. banking regulators issued a proposal to revise the risk-based capital standards applicable to the Company and Truist Bank. This proposal would introduce new approaches for credit risk, operational risk, market risk and credit valuation adjustment risk. The proposal would introduce a new measure of risk-weighted assets, which would reflect the proposed new standardized approaches for credit risk, operational risk and credit valuation adjustment risk, as well as a proposed new measure for market risk that would be based on both internal models and standardized supervisory models of market risk. The proposal includes a proposed effective date of July 1, 2025, subject to a three-year transition period ending July 1, 2028, over which the expanded total risk-weighted assets would be phased in.

In August 2023, the U.S. banking regulators proposed a rule that would require banking organizations with \$100 billion or more in total assets to comply with long-term debt requirements and clean holding company requirements that currently apply only to global systemically important banking organizations. This proposal would also impose a long-term debt requirement on certain categories of insured depository institutions that are not consolidated subsidiaries of U.S. GSIBs, including insured depository institutions with \$100 billion or more in total assets, such as Truist Bank. If adopted, this proposal would require the Company and Truist Bank to each maintain a minimum outstanding eligible long-term debt amount of no less than the greatest of (i) 6% of risk-weighted assets, (ii) 2.5% of total leverage exposure and (iii) 3.5% of average total consolidated assets. Truist Bank would be required to issue the minimum amount of eligible long-term debt to the Company, and the Company would be required to issue the minimum amount of eligible long-term debt externally. In addition, if adopted as proposed, the clean holding company requirement would limit or prohibit the Company from entering into certain transactions that could impede its orderly resolution, including, for example, prohibiting the Company from entering into transactions that could spread losses to subsidiaries and third parties, as well as limiting the amount of the Company's liabilities that are not eligible long-term debt.

In August 2023, the FDIC issued a proposal to amend its rules requiring covered insured depository institutions, including Truist Bank, to periodically submit resolution plans to the FDIC. If adopted as proposed, Truist Bank would be required to submit a full resolution plan to the FDIC every two years and submit an interim supplement in each year that it is not required to submit a full resolution plan. In addition, this proposal would increase the content requirements for plan submissions and introduce a new credibility standard for the FDIC's evaluation of resolution plans, which would be enforceable against the covered insured depository institutions. Separately, the FRB and FDIC also proposed updated guidance on resolution planning requirements applicable to the Company under Section 165(d) of the Dodd-Frank Act.

In addition, the FDIC proposed a special assessment to repay losses to the FDIC's Deposit Insurance Fund. If the final rule is adopted as proposed, the special assessment for Truist is estimated at approximately \$460 million to be recognized at the time the rule is finalized and paid in eight quarterly installments beginning in the first quarter of 2024. Refer to the "Note 14. Commitments and Contingencies" in Truist's September 30, 2023 Form 10-Q for additional information related to the FDIC's special assessments.

This report provides information about Truist's capital structure, capital adequacy, risk exposures, RWA, and risk management framework. It should be read in conjunction with Truist's Annual Report on Form 10-K for the year ended December 31, 2022 and Quarterly Report on Form 10-Q for the period ended September 30, 2023 and the Consolidated Financial Statements for Bank Holding Companies - Form FR Y-9C for the period ended September 30, 2023. Truist's SEC filings are located on its website at ir.truist.com/sec-filings and Truist's other regulatory reports are located on its website at ir.truist.com/other-filings.

Pillar 3 Report Overview

The Basel framework consists of a three "Pillar" approach:

- Pillar 1 establishes minimum capital requirements, defines eligible capital instruments, and prescribes rules for calculating RWA.
- Pillar 2 requires banks to have an internal capital adequacy assessment process and requires that banking supervisors evaluate each bank's overall risk profile as well as its risk management and internal control processes.
- Pillar 3 encourages market discipline through disclosure requirements which allow market participants to assess the risk and capital profiles of banks.

The cross reference table located in the Appendix specifies the location of disclosures required by the Rule.

Basis of Consolidation

The basis of consolidation used for regulatory reporting is the same as that used under GAAP. The disclosures contained herein are on a consolidated basis unless otherwise noted. There are no entities within Truist that are deconsolidated for regulatory reporting, or whose capital is deducted. These disclosures have not been audited by the Company's external auditors.

See "Principles of Consolidation" in "Note 1. Basis of Presentation" in Truist's September 30, 2023 Form 10-Q for more information on the basis of consolidation.

Capital Structure

Truist and Truist Bank are subject to certain risk-based capital and leverage ratio requirements established by the FRB, for Truist, and by the FDIC, for Truist Bank. These requirements are based on the capital framework developed by the BCBS for strengthening the regulation, supervision, and risk management of banks under Basel III rules, as well as certain provisions of the Dodd-Frank Act. These quantitative calculations are minimums, and the FRB and FDIC may determine that a banking organization, based on its size, complexity, or risk profile, must maintain a higher level of capital in order to operate in a safe and sound manner. Failure to be well capitalized or to meet minimum capital requirements could result in certain mandatory and possible additional discretionary actions by regulators that, if undertaken, could have an adverse material effect on Truist's operations or financial condition. These actions could include requiring Truist to commit capital to Truist Bank in abnormal operating conditions which would otherwise be available to Truist's creditors and shareholders. Failure to be well capitalized or to meet minimum capital requirements could also result in restrictions on Truist's or Truist Bank's ability to pay dividends or otherwise distribute capital or to receive regulatory approval for acquisitions.

As of September 30, 2023, Truist and Truist Bank qualified as well capitalized, with capital levels in excess of the minimum regulatory capital requirements.

Definition of Capital

Regulatory capital includes the following elements:

- CET1 capital includes primarily common shareholders' equity subject to certain regulatory adjustments and deductions, which
 excludes the impact of goodwill, intangible assets, certain deferred tax assets, AOCI, and the impact of the CECL transition
 provision.
- Tier 1 capital includes primarily CET1 capital, perpetual preferred stock, and certain qualifying capital instruments.
- Tier 2 capital includes primarily qualifying subordinated debt and qualifying ACL. Tier 2 capital also includes, among other things, certain trust preferred securities.
- Total capital includes Tier 1 capital plus Tier 2 capital.

A reconciliation of total shareholders' equity to CET1 capital, Tier 1 capital, Tier 2 capital, and Total capital is presented in Truist's September 30, 2023 Form FR Y-9C. Refer to the "Consolidated Balance Sheets" in Truist's September 30, 2023 Form 10-Q for the components of total shareholders' equity.

Capital in Subsidiaries

At September 30, 2023, the amount of surplus capital of insurance subsidiaries included in regulatory capital was not material.

RWA

Under the Rule, Truist's and Truist Bank's assets, exposures, and certain off-balance sheet items are subject to risk weights used to determine the institutions' RWA. These RWA are used to calculate the required minimum capital ratios for Truist and Truist Bank. See the "Capital Ratios" section herein for further discussion of the capital ratio components.

The RWA calculation is used in determining the institution's capital requirement. RWA under the standardized approach are generally based on supervisory risk weightings that vary by counterparty type and asset class. The predefined risk weight classifications generally range from 0% for U.S. government securities to 600% for certain equity exposures, with a maximum risk weight classification of 1,250% for certain securitization exposures.

Market Risk Rule

Certain large banking organizations with trading assets and liabilities above certain thresholds, including Truist, are subject to the Market Risk Rule and must adjust their risk-based capital ratios to reflect the market risk of their trading activities. Refer to the "Market Risk" section in the MD&A of the Truist's Annual Report on Form 10-K for the year ended December 31, 2022 and Quarterly Report on Form 10-Q for the period ended September 30, 2023 for additional disclosures related to market risk management.

Components of RWA

The following table presents Truist's RWA by exposure type at September 30, 2023:

Table 3-1 **Basel III Standardized Transitional Approach RWA**

| (Dollars in millions) | September 30, 2023 |
|--|-----------------------|
| Credit risk ⁽¹⁾ : | |
| Corporate and consumer exposures ⁽²⁾ | \$ 331,293 |
| Exposure to residential mortgage loans | 39,388 |
| Exposure to GSEs | 16,774 |
| Equity exposures | 16,743 |
| Exposure to PSEs | 6,374 |
| Securitization exposures | 4,298 |
| Exposure to OTC derivatives | 1,908 |
| Exposure to past due loans | 1,866 |
| Exposure to HVCRE loans | 1,367 |
| Exposure to depository institutions, foreign banks and credit unions | 1,039 |
| Exposure to statutory multifamily mortgage | 1,007 |
| Exposure to sovereign entities | 491 |
| Cleared transactions | 20 |
| Total standardized credit risk | 422,568 |
| Total standardized market risk | 6,187 |
| Total standardized RWA | \$ 428,755 |

⁽¹⁾ Truist does not have any exposures to supranational entities and MDBs or default fund contributions.

See the Company's September 30, 2023 Form Y-9C, Schedule HC-R Part I and Part II, on the FFIEC website for disclosures required by Basel III related to the following:

- Total standardized RWA by exposure type, including the related on- and off-balance sheet exposure;
- Standardized market RWA as calculated under the Market Risk Rule. Additional details are also available in the FFIEC 102 report on the FFIEC's website; and
- CET1, Tier 1 capital, and Total risk-based capital components and related calculations.

⁽²⁾ Corporate and consumer exposures also include other assets.

Capital Ratios

Under capital adequacy guidelines and the regulatory framework for prompt corrective action, the Company must meet specific capital guidelines that involve quantitative measures of assets, liabilities, and certain off-balance sheet items calculated pursuant to regulatory directives. Truist's capital amounts and classifications are also subject to qualitative judgments by the regulators about components, risk weightings, and other factors. Truist is in full compliance with these requirements. Banking regulations also identify five capital categories for insured depository institutions: well capitalized, adequately capitalized, undercapitalized, significantly undercapitalized, and critically undercapitalized. At September 30, 2023, Truist and Truist Bank were classified as "well capitalized," and management believes that no events or changes have occurred subsequent to period end that would change this designation.

To avoid certain regulatory restrictions, Truist and Truist Bank are required to maintain minimum ratios of CET1 ratio of 4.5%, Tier 1 capital ratio of 6%, Total capital to risk-weighted assets ratio of 8%, Tier 1 capital to quarterly average tangible assets (leverage ratio) of 4%, and Tier 1 capital to total exposures (supplementary leverage) of 3%.

Capital Conservation Buffer and Stress Capital Buffer

Truist and Truist Bank are subject to certain risk-based and leverage capital ratio requirements established by the FRB, for Truist, and by the FDIC, for Truist Bank. These requirements are based on the capital framework developed by the BCBS for strengthening the regulation, supervision, and risk management of banks under Basel III rules, as well as certain provisions of the Dodd-Frank Act. These quantitative calculations are minimums, and the FRB and FDIC may determine that a banking organization, based on its size, complexity, or risk profile, must maintain a higher level of capital in order to operate in a safe and sound manner. Failure to be well capitalized or to meet minimum capital requirements could result in certain mandatory and discretionary actions by regulators that, if undertaken, could have an adverse material effect on Truist's operations or financial condition. These actions could include requiring Truist to commit capital to Truist Bank in abnormal operating conditions which would otherwise be available to Truist's creditors and shareholders. Failure to be well capitalized or to meet minimum capital requirements could also result in restrictions on Truist's or Truist Bank's ability to pay dividends or otherwise distribute capital or to receive regulatory approval for acquisitions.

Under the FRB's capital framework for BHCs, Truist is subject to capital requirements, including the SCB, that are determined from the supervisory stress test results. Truist's SCB is equal to the greater of (i) the difference between its starting and minimum projected CET1 capital ratios under the severely adverse scenario in the supervisory stress test, plus the sum of the dollar amount of its planned common stock dividends for each of the fourth through seventh quarters of the planning horizon as a percentage of risk-weighted assets, or (ii) 2.5%. The FRB assigned Truist an SCB of 2.5%, which is effective from October 31, 2022 through September 30, 2023. Under the 2023 CCAR process, Truist was notified its SCB requirement would be 2.9% from October 1, 2023 through September 30, 2024. Truist is required to describe its planned capital actions in its CCAR capital plan, but is no longer required to seek prior approval if it makes capital distributions in excess of those included in its CCAR capital plan. Instead, Truist is subject to automatic distribution limitations if its capital ratios fall below its buffer requirements, which include the SCB.

For certain large banking organizations, the SCB could be supplemented by a countercyclical capital buffer of up to an additional 2.5% of risk-weighted assets. This buffer is currently set at zero. An FRB policy statement establishes the framework and factors the FRB would use in setting and adjusting the amount of the countercyclical capital buffer. Covered banking organizations would generally have 12 months after the announcement of any increase in the countercyclical capital buffer to meet the increased buffer requirement, unless the FRB establishes an earlier effective date. If the full countercyclical buffer amount is implemented, Truist and Truist Bank would be required to maintain a CET1 capital ratio of at least 9.5%, a Tier 1 capital ratio of at least 11.0%, and a Total capital ratio of at least 13.0% to avoid limitations on capital distributions and certain discretionary incentive compensation payments. See additional discussion related to the SCB and CCB in Truist's Annual Report on Form 10-K for the year ended December 31, 2022 and Quarterly Report on Form 10-Q for the period ended September 30, 2023.

Truist and Truist Bank are subject to a Tier 1 leverage ratio, equal to the ratio of Tier 1 capital to quarterly average assets, net of goodwill, certain other intangible assets, and certain other deductions. Category III banking organizations are also subject to a minimum 3.0% supplementary leverage ratio. The supplementary leverage ratio is calculated by dividing Tier 1 capital by total leverage exposure, which takes into account on-balance sheet assets as well as certain off-balance sheet items, including loan commitments and potential future exposure of derivative contracts.

The total minimum regulatory capital ratios and well capitalized minimum ratios applicable to Category III banking organizations at September 30, 2023 are reflected in the table below. The FRB has not yet revised the well-capitalized standard for BHCs to reflect capital requirements imposed under the Basel III Rules. For purposes of certain FRB rules, including determining whether a BHC meets the requirements to be a FHC, BHCs, such as Truist, must maintain a Tier 1 Risk-Based Capital Ratio of 6.0% or greater and a Total Risk-Based Capital Ratio of 10.0% or greater to meet the well-capitalized minimum. The FRB may require BHCs, including Truist, to maintain capital ratios in excess of mandated minimum levels, depending upon general economic conditions and a BHC's particular condition, risk profile, and growth plans.

The following table presents regulatory capital and risk-based capital ratios for Truist and Truist Bank at September 30, 2023:

Table 3-2 **Capital Requirements and Ratios** September 30, 2023

| (Dollars in millions) | Minimum Capital | Well Capitalized | Minimum Capital Plus SCB / CCB ⁽¹⁾ | Ratio | Amount |
|------------------------------|--------------------|---------------------|--|-----------|--------|
| Truist: | | | | | |
| CET1 | 4.5 % | NA | 7.0 % | 9.9 % \$ | 42,276 |
| Tier 1 capital | 6.0 | 6.0 % | 8.5 | 11.4 | 48,946 |
| Total capital | 8.0 | 10.0 | 10.5 | 13.5 | 57,713 |
| Leverage ratio | 4.0 | NA | NA | 9.2 | 48,946 |
| Supplementary leverage ratio | 3.0 | NA | NA | 7.8 | 48,946 |
| Truist Bank: | | | | | |
| CET1 | 4.5 % | 6.5 % | 7.0 % | 11.6 % \$ | 48,867 |
| Tier 1 capital | 6.0 | 8.0 | 8.5 | 11.6 | 48,867 |
| Total capital | 8.0 | 10.0 | 10.5 | 13.3 | 55,753 |
| Leverage ratio | 4.0 | 5.0 | NA | 9.3 | 48,867 |
| Supplementary leverage ratio | 3.0 | NA | NA | 7.9 | 48,867 |

Reflects Truist's SCB requirement, received in the CCAR 2022 process, of 2.5% applicable from October 1, 2022 through September 30, 2023. Beginning on October 1, 2023, through September 30, 2024, Truist will be subject to a 2.9% SCB received in the CCAR 2023 process.

For additional information refer to "Item 1. Business" section and the "Capital" MD&A section in Truist's Annual Report on Form 10-K for the year ended December 31, 2022 and the "Capital" MD&A section in Truist's Quarterly Report on Form 10-Q for the period ended September 30, 2023.

Other Capital Ratio Considerations

Revisions to Definition of Eligible Retained Income

The U.S. banking agencies have adopted a final rule altering the definition of eligible retained income. Under the final rule, eligible retained income is the greater of a firm's (i) net income for the four preceding calendar quarters, net of any distributions and associated tax effects not already reflected in net income, and (ii) average net income over the preceding four quarters. This definition applies with respect to all of Truist's capital requirements.

Current Expected Credit Losses Methodology

In 2020, the U.S. banking agencies adopted a final rule that permitted banking organizations to elect to delay temporarily the implementation of CECL until January 2022 and subsequently to phase in the effects of CECL on regulatory capital through January 2025, which Truist elected to use. Under the five-year transition, Truist deferred for two years 100% of the day-one effect of adopting CECL and 25% of the cumulative increase or decrease in the allowance for credit losses since adoption of CECL. Following the first two years, Truist began to phase in the aggregate capital effects over the next three years consistent with the transition in the original three-year transition rule. Truist has elected to use the five-year transition to phase in the impacts of CECL on regulatory capital. The 2023 impact on CET1 related to the phase in was 12 basis points, representing one-fourth of the phase in. The remaining phase in will be amortized ratably in the first guarter of 2024 and 2025.

Capital Adequacy Process

The maintenance of appropriate levels of capital is a top priority of management and is monitored on a regular basis. Truist's principal goals related to the maintenance of capital are to provide adequate capital to support Truist's risk profile consistent with its Board-approved risk appetite, provide financial flexibility to support future growth and client needs, comply with relevant laws, regulations, and supervisory guidance, achieve optimal credit ratings for Truist and its subsidiaries, and provide a competitive return to shareholders.

Enhanced Prudential Standards and Regulatory Tailoring Rules

Certain U.S. BHCs, including Truist, are subject to enhanced prudential standards. As such, Truist is subject to more stringent liquidity and capital requirements, leverage limits, stress testing, single-counterparty credit limits, resolution planning and risk management standards than those applicable to smaller institutions. Certain larger banking organizations are subject to additional enhanced prudential standards.

Under the Tailoring Rules, Truist is subject to the standards applicable to Category III banking organizations, which generally include BHCs with greater than \$250 billion, but less than \$700 billion, in total consolidated assets and less than \$75 billion in certain risk-related exposures.

Certain BHCs and their bank subsidiaries, including Truist and Truist Bank, are subject to a minimum LCR. The LCR is designed to ensure that BHCs have sufficient high-quality liquid assets to survive a significant liquidity stress event lasting for 30 calendar days.

Truist also is subject to FRB rules that require certain large BHCs to conduct internal liquidity stress tests over a range of time horizons, maintain a buffer of highly liquid assets sufficient to meet projected net outflows under the BHC's 30-day liquidity stress test, and maintain a contingency funding plan that meets certain requirements.

In July 2021, Truist became subject to rules implementing the NSFR, which are designed to ensure that banking organizations maintain a stable, long-term funding profile in relation to their asset composition and off-balance sheet activities. The NSFR, calculated as the ratio of available stable funding to required stable funding, must exceed 1.0x. Available stable funding represents a weighted measure of a company's funding sources over a one-year time horizon, calculated by applying standardized weightings to the company's equity and liabilities based on their expected stability. Required stable funding is calculated by applying standardized weightings to assets, derivatives exposures, and certain other items based on their liquidity characteristics. As a Category III banking organization, Truist and Truist Bank are subject to an NSFR requirement equal to 85% of the full requirement. At September 30, 2023, the Company was compliant with this requirement. Truist's "Liquidity Coverage Ratio Disclosures" are located on its website at ir.truist.com/other-fillings.

See Truist's Annual Report on Form 10-K for the year ended December 31, 2022 for a discussion of requirements for Category III banking organizations.

Capital Planning and Stress Testing Requirements

Truist regularly performs stress testing on its capital levels and is required to periodically submit the Company's capital plans and stress testing results to the banking regulators. Management regularly monitors the capital position of Truist on both a consolidated and banklevel basis. In this regard, management's objective is to maintain capital at levels that are in excess of internal capital targets, which are above the regulatory "well capitalized" minimums. Management has implemented stressed capital ratio minimum targets to evaluate whether capital ratios calculated after the effect of alternative capital actions are likely to remain above minimums specified by the FRB for the annual CCAR process. Breaches of stressed minimum targets prompt a review of the planned capital actions included in Truist's capital plan.

Truist must submit an annual capital plan to the FRB that reflects its projected financial performance under baseline and stressful macroeconomic conditions, and proposed capital distributions must meet SCB requirements based on the FRB's annual CCAR process. Truist generally may pay dividends and interest on capital securities and repurchase or retire capital securities in accordance with a capital plan that meets SCB requirements.

The FRB's CCAR framework and the Dodd-Frank Act stress testing framework also require BHCs subject to Category III standards, such as Truist, to conduct company-run stress tests and submit to supervisory stress tests conducted by the FRB. The company-run stress tests employ stress scenarios provided by the FRB and incorporate the Dodd-Frank Act capital actions, which are intended to normalize capital distribution assumptions across large U.S. BHCs. In addition, Truist is required to conduct annual stress tests using internally-developed scenarios intended to stress the unique risk profile of the institution. The FRB also conducts CCAR and Dodd-Frank Act supervisory stress tests employing internal models on the supervisory stress scenarios. As a Category III banking organization, Truist is subject to supervisory stress testing on an annual basis and company-run stress testing on a biennial basis.

Risk Management

Truist maintains a comprehensive risk management framework supported by people, processes, and systems to identify, measure, monitor, manage, and report significant risks arising from its exposures and business activities. Effective risk management involves appropriately balancing risk and return, operating in a safe and sound manner, and complying with applicable laws and regulations. The Company's risk management framework is designed to ensure that business strategies and objectives are executed in alignment with its risk appetite.

Truist is committed to fostering a culture that supports transparency and escalation of risks across the organization. All teammates are responsible for upholding the Company's purpose, mission, and values, and are encouraged to speak up if there is any activity or behavior that is inconsistent with the Company's culture. The Truist Code of Ethics guides and unites the Company's decision making and informs teammates on how to act in the absence of specific guidance.

Capital, liquidity, and resolution and recovery planning are overseen by various oversight committees. Regular reporting is provided to the Board of Directors and Executive Leadership on the assessments of risk, stress test results, and governance of the models and tools used for these processes including CAP.

The Board of Directors meets regularly to provide oversight regarding the management, objectives, and goals of the organization with regard to capital adequacy. Stress testing methodologies ensure the information provided captures forecasted losses for all material elements of the balance sheet and income statement. These results are provided for the baseline and stress scenarios, enabling the Board of Directors and risk committees to review expected performance against capital goals, targets, and risk appetite.

Refer to the "Risk Management" and "Capital" sections of the MD&A in Truist's Annual Report on Form 10-K for the year ended December 31, 2022 and Quarterly Report on Form 10-Q for the period ended September 30, 2023 for more information regarding the Company's risk management framework and CAP.

Credit Risk

Credit risk is the risk to current or anticipated earnings or capital arising from the default, inability, or unwillingness of a borrower, obligor, or counterparty to meet the terms of any financial obligation to Truist or otherwise perform as agreed. Credit risk exists in all activities where success depends on the performance of a borrower, obligor, or counterparty. Credit risk arises when Truist funds are extended, committed, invested, or otherwise exposed through actual or implied contractual agreements, whether on or off-balance sheet. Credit risk increases when the credit quality of an issuer whose securities or other instruments the bank holds deteriorates.

Truist has established the following general practices to manage credit risk:

- limiting the amount of credit that Truist may extend to a borrower;
- establishing a process for credit approval accountability;
- careful initial underwriting and analysis of borrower, transaction, market, and collateral risks;
- ongoing servicing and monitoring of individual loans and lending relationships;
- continuous monitoring of the portfolio, market dynamics, and the economy; and
- periodically reevaluating the Company's strategy and overall exposure as economic, market, and other relevant conditions change.

Truist continuously monitors various segments of its credit portfolios to assess potential concentration risks. Management is actively involved in the credit approval and review process, and risk acceptance criteria are adjusted as needed to reflect the Company's risk appetite. Consistent with established risk management objectives, the Company utilizes various risk mitigation techniques, including collecting collateral and security interests, obtaining guarantees, and, to a limited extent, through the purchase of credit loss protection via third party insurance and/or use of credit derivatives such as CDS.

The Company categorizes its loan portfolio into three segments: commercial lending, consumer lending, and credit card. The Company further disaggregates its commercial and consumer loans into various classes based on their underlying risk characteristics.

In the commercial portfolio, risk concentrations are evaluated regularly on both an aggregate portfolio level and on an individual client basis. The Company manages its commercial exposure through portfolio targets, limits, and transactional risk acceptance criteria as well as other techniques, including but not limited to, loan syndications/participations, loan sales, collateral, structure, covenants, and other riskreduction techniques. The accompanying disclosures are presented net of participations sold.

In the consumer portfolio, concentrations are evaluated based on purpose, geographic location, and risk characteristics such as credit rating, loan-to-value ratio, and term, with a focus on trends and concentrations at the portfolio level where potential risk concentrations can be remedied through changes in underwriting policies and portfolio guidelines.

Additional disclosures related to the Company's credit exposures and credit risk policies are included in Truist's Annual Report on Form 10-K for the year ended December 31, 2022 and Quarterly Report on Form 10-Q for the period ended September 30, 2023.

Maturities

The following tables provide the remaining contractual maturity distribution by category for loans and leases and off balance sheet credit commitments, which includes unfunded commitments and letters of credit. The contractual amounts of off-balance sheet credit commitments represent the maximum exposure to credit loss in the event of default by the borrower if the borrower were to fully draw against the commitment. The Company manages this credit risk using the same credit policies it applies to loans. Management assesses the borrower's credit worthiness to determine the necessary collateral, which may include marketable securities, receivables, inventory, equipment, and real estate. For additional information, refer to the "Lending Activities" section of the MD&A in Truist's Annual Report on Form 10-K for the year ended December 31, 2022 and Quarterly Report on Form 10-Q for the period ended September 30, 2023.

| Home equity | | 1,050 | | 8,246 | | 12,300 | | 108 | 21,704 | 21,818 |
| Other consumer | | 2,270 | | 5,024 | | 2,345 | | 276 | 9,915 | 9,854 |
| Credit card | | 23,917 | | _ | | _ | | _ | 23,917 | 24,113 |
| Total unfunded commitments ⁽³⁾ | \$ | 61,222 | \$ | 127,331 | \$ | 17,165 | \$ | 1,452 | \$ 207,170 | \$ 208,349 |
| Letters of credit: | | | | | | | | | | |
| Standby ⁽³⁾ | \$ | 2,801 | \$ | 2,509 | \$ | 125 | \$ | 2 | \$ 5,437 | \$ 5,275 |
| Commercial | | 41 | | 12 | | _ | | _ | 53 | 46 |

⁽¹⁾ Approximately \$52.5 billion are unconditionally cancellable for the purposes of calculating regulatory capital.

⁽²⁾ The maturities of residential mortgage loan commitments are based on the loan maturities upon funding.

⁽³⁾ Excludes \$4.3 billion of unfunded commitments and \$816 million of letters of credit that have been conveyed to others and \$1.3 billion of other non-credit unfunded commitments.

Geographic Disclosures

The following tables provide the geographical distribution of commercial and consumer exposures. For the geographic disclosures, amounts are generally assigned to a state based on the physical billing address of the client or physical property address. The credit exposure includes loans and contractual commitments to extend credit. Commercial loans that are 90 days or more past due and accruing interest are immaterial. Government guaranteed loans are not placed on nonaccrual status regardless of delinquency because collection of principal and interest is reasonably assured.

| Total credit card | \$ 4,928 | \$ 68 | \$ 47 | \$ 23,917 |

There are no nonperforming credit card loans as they are charged-off rather than being reclassified as nonperforming.

Investment Securities

Truist invests in securities allowable under bank regulations. These securities are classified as AFS and HTM and may include obligations of the U.S. Treasury, U.S. government agencies, GSEs (including MBS), bank eligible obligations of any state or political subdivision, nonagency MBS, structured notes, bank eligible corporate obligations (including corporate debentures), commercial paper, negotiable CDs, bankers acceptances, mutual funds, and limited types of equity securities. The most important feature management relies on when assessing credit risk for U.S. Treasury securities and Agency MBS is the guarantee of the Federal government or its agencies.

U.S. Treasury, GSE, and Agency MBS represented 97% of the total securities portfolio as of September 30, 2023.

Industry Disclosures

The following tables provide industry distribution by major types of commercial credit exposure. The credit exposure includes loans and contractual commitments to extend credit. Commercial loans that are 90 days or more past due and accruing interest are immaterial. Industry classification for commercial and industrial loans is based on the North American Industry Classification System. Commercial real estate loans are classified based on type of property. Consumer credit exposures and credit card exposures have been excluded from these tables.

Counterparty Credit Risk-Related Exposures

Counterparty credit risk is the risk that a counterparty to a transaction with the Company fails to perform. This risk is a byproduct of transactions undertaken by the Company to facilitate a client's financing and hedging needs and can also result from the Company's normal balance sheet management, risk management, and funding activities. Counterparty risk is a category of credit risk often associated with capital markets activities, including OTC derivatives and securities financing.

For further information on counterparty credit risk, refer to "Risk Management" in the MD&A, "Note 3. Securities Financing Activities" and "Note 16. Derivative Financial Instruments" in the Truist's Quarterly Report on Form 10-Q for the period ended September 30, 2023 and "Note 1. Basis of Presentation" in Truist's Annual Report on Form 10-K for the year ended December 31, 2022.

OTC derivatives

As a dealer and market maker, the Company uses OTC derivatives primarily to support client hedging and risk management activities, as well as in an end-user capacity to manage its own balance sheet risk exposures. As a financial entity, certain interest rate swaps and CDS transactions entered into by the Company or its subsidiaries are subject to mandatory clearing. At September 30, 2023, the Company had no amount of purchased non-cleared OTC credit derivatives related to management of its own balance sheet risk exposures. Additionally, the Company had \$2.8 billion of purchased notional and \$6.5 billion of sold notional OTC credit derivatives to support client hedging and risk management activities. Additional details of the Company's use of derivatives are included in "Note 16. Derivative Financial Instruments" in the Truist's September 30, 2023 Form 10-Q.

Counterparty credit risk management is integrated into the Company's credit risk management function. For transactions that generate meaningful counterparty credit risk, credit officers first perform a credit underwriting of the counterparty and assign an internal risk rating, before finally determining an aggregate credit exposure limit. Furthermore, if multiple underlying products and risk exposures are involved, then separate limits are assigned for each product with the counterparty. The counterparty exposure arising from OTC derivatives and securities lending transactions is aggregated with all other borrower exposures for risk management purposes.

In addition to counterparty selection and ongoing monitoring, documentation and collateral management are central to the Company's counterparty risk management efforts. Transactions are typically executed under master netting agreements. These documents provide a variety of legal protections, most notably the ability to close out all trades under that agreement on a net basis in the event of a counterparty default. The Company's legal department chairs a committee that reviews master netting agreements to confirm the enforceability of netting and collateral arrangements and generally obtains third party legal opinions regarding enforceability.

The regulatory requirement to centrally clear eligible derivative transactions with eligible CCPs has reduced the Company's counterparty credit exposure to dealers; however it has in turn increased its exposure to CCPs. The Company manages its exposure to CCPs using the same risk management practices as used for other counterparties and in accordance with supervisory guidance.

The values of OTC derivatives are based on the movement in one or more underlying variables (e.g., interest rates, credit spreads, foreign exchange rates, etc.). For internal risk management purposes, the Company establishes credit limits based on a measure of PFE, a statistical measure (at a high confidence interval) of the amount that a counterparty could owe the Company at some future point in time, taking into account collateral requirements and legally enforceable netting arrangements. The PFE, current credit exposure or mark-tomarket, and collateral values, if applicable, are refreshed daily and used to calculate total counterparty credit exposure, which is compared against pre-established limits. The Company has an established limit exception management process in place which identifies, escalates, remediates, and documents any risk exposures that may exceed limits. As a bank subject to the standardized approach, RWA for OTC derivatives is determined using the methodology prescribed in the Rule for calculating PFE, and as such, the Company does not use its internal model generated PFE for that purpose.

The Company typically establishes zero threshold margin arrangements with dealers, governed under ISDA/CSA documents, such that when the fair value of a derivative changes, the out-of-the-money counterparty posts collateral to the in-the-money counterparty; collateral is generally exchanged on a daily basis. OTC derivative transactions with non-dealer clients are generally not subject to the same margin arrangements; however, they are still subject to master netting arrangements and the Company uses other available risk management techniques when necessary.

Pillar 3 Regulatory Capital Disclosures

Truist Financial Corporation September 30, 2023

For OTC derivative transactions subject to a CSA, the Company typically only accepts high quality, liquid collateral instruments such as cash, U.S. Treasury, or agency-issued instruments, subject to applicable haircuts, as necessary. This collateral generally qualifies as financial collateral pursuant to the Rule. Cash represents the majority of the Company's collateral positions and is typically held in the Company's account or at another financial institution. Securities collateral is held at the Company's custodian bank in the Company's name and is generally controlled by the Company. In limited circumstances, collateral may be posted to an independent custodian bank for the benefit of the Company; in these circumstances, the Company does not have direct control over the collateral.

All OTC derivative transactions subject to margining requirements are monitored daily by an independent control function to ensure that collateral calls are issued and met in a timely manner. This function also ensures that any excess collateral posted by the Company to a counterparty is actively managed and withdrawn when no longer required. All collateral is valued daily. The collateral control function follows established procedures to resolve any disputes on the amount of collateral required, and escalation procedures are in place to ensure senior management is informed of any material disputes on a timely basis. In a limited number of situations, the Company's CSAs contain ratings-based thresholds, such that the Company would need to post additional collateral to the degree that it suffered a credit downgrade.

Derivative instruments are priced using observable market inputs at a mid-market valuation point and take into consideration appropriate valuation adjustments for collateral, market liquidity, and counterparty credit risk. For purposes of determining fair value adjustments to its derivative positions, the Company takes into consideration the credit profile and likelihood of default by counterparties and itself, as well as, its net exposure, which considers legally enforceable master netting agreements and financial collateral along with remaining maturities. The expected loss of each counterparty, the CVA, is estimated using market-based views of counterparty default probabilities observed in the single-name CDS market, when available and of sufficient liquidity. When single-name CDS market data is not available or not of sufficient liquidity, the probability of default is estimated using a combination of the Company's internal risk rating system and sector/rating based CDS data.

For purposes of estimating the Company's own credit risk on derivative liability positions, the DVA, the Company uses probabilities of default from observable, sector/rating based CDS data. Information on the Company's fair value measurements can be found in the Company's September 30, 2023 Form 10-Q in "Note 15. Fair Value Disclosures."

Securities financing

The securities financing market encompasses both repurchase and reverse repurchase agreements, as well as securities lending/ borrowing transactions. These transactions are structured such that borrowers post collateral in exchange for the ability to borrow cash or securities. Securities financing transactions enable cost-effective borrowing for clients and the Company and facilitate a variety of market making activities. Truist's securities financing transactions are subject to the same risk management procedures, and applicable RWA calculations consider eligible collateral and/or the counterparty to the underlying transaction.

Securities financing transactions are typically secured by high-quality, liquid collateral. The Company establishes limits on counterparties using the Basel Collateral Haircut methodology, measuring in this case the amount that the Company could lose if it were forced to close out the transaction ahead of scheduled maturity in a stressed situation. The Company may supplement its credit limits with notional limits based on the counterparty and/or the size of the financing arrangement.

Securities financing transactions provide for the regular movement of collateral so that the lender maintains an appropriate margin. The Company monitors its securities financing positions on a daily basis and calls for additional collateral as needed. The collateral received is typically held in an account with the Company's securities custodian.

Credit Risk Mitigation

The Rule allows eligible financial collateral, guarantees, and credit derivatives to be recognized in the calculation of RWA. The Company's use of credit risk mitigants in the calculation of RWA includes eligible collateral primarily in the form of U.S. Treasury or agency securities as well as cash. The company also uses credit derivatives to reduce RWA for certain exposures and has certain conditional guarantees related to certain government guaranteed loan portfolios. When financial collateral is obtained that qualifies as eligible collateral under the Rule, the eliqible collateral can be substituted for the collateralized portion of the credit exposure in the RWA calculation. Similarly, when an eligible guarantee is received, the risk weight applicable to the eligible guarantor would apply to the exposure amount covered by the guarantee. In the case of government guaranteed loans that are covered by a conditional guarantee the exposures are subject to a 20% risk weight, with the exception of PPP loans that received a zero percent risk weight.

The following table summarizes OTC derivative contracts covered by eligible collateral:

Table 7-1 Total Exposure of OTC Derivative Contracts Covered by Eligible Collateral **September 30, 2023**

| (Dollars in millions) | (| s Current Credit posure | Poten Futu Expos | re | _ | Total posure |

| Net exposure for derivatives covered by eligible collateral | \$ | 474 | \$ | 1,931 | \$ | 2,405 |

CDS as Credit Risk Mitigant

As of September 30, 2023, the company had \$175 million of credit derivatives protection that were purchased as a credit risk mitigant that also met the requirements of a guarantee under the capital rules. This produced a RWA benefit of \$103 million.

Government Guaranteed Exposures

Truist has certain loans and other assets totaling approximately \$2.6 billion with guarantees by the U.S. government. This includes \$90 million of PPP loans, which receive a zero percent risk weight.

Securitizations

Overview

The Basel III framework for securitizations addresses the capital treatment for exposures that involve the tranching of credit risk and categorizes securitizations as either traditional or synthetic.

The Rule describes securitization transactions as:

- All or a portion of the credit risk of one or more underlying exposures is transferred to one or more third parties other than through the use of credit derivatives or guarantees;
- The credit risk associated with the underlying exposures has been separated into at least two tranches reflecting different levels of seniority:
- Performance of the securitization exposures is solely dependent on the performance of the underlying exposures; and
- All or substantially all of the underlying exposures are financial exposures.

A synthetic securitization shares the same attributes as a traditional securitization, except that all or a portion of the credit risk of one or more underlying assets is retained or transferred to one or more third parties through the use of one or more credit derivatives or guarantees.

Any securitization where one or more of the underlying exposures are a securitization exposure is considered to be a resecuritization. The Company did not have resecuritization exposures at September 30, 2023.

Securitization process

The Company's current exposure to securitizations primarily includes loans to SPEs (not sponsored by the Company) that are designed to meet client needs for long-term financing of assets or working capital. These securitization arrangements assist the Company's clients in funding their financial assets. The Company also has securitization exposures in the form of non-agency MBS within its AFS portfolio. Exposure amounts at September 30, 2023 are provided below in Tables 8-1 and 8-2.

The Company also originates and sells certain mortgages to Fannie Mae and Freddie Mac and issues and sells Ginnie Mae MBS. The Company transfers loans to securitization entities sponsored by these agencies. The loans are exchanged for cash or securities that are readily redeemable for cash, with servicing rights retained. The Company has made certain representations and warranties with respect to the transfer of these loans and has entered into a loss share guarantee related to certain loans transferred to Fannie Mae.

At September 30, 2023, the Company held \$180 million of LHFS that it intends to securitize with Ginnie Mae. The Company periodically evaluates securitizations as a source of alternate financing; however, it does not expect securitization to comprise a significant amount of total funding.

Due diligence

The Company analyzes the credit profile of each securitization exposure prior to entering into that position and documents such due diligence within the timeframe required under the Rule. The due diligence procedures are designed to provide the Company with a comprehensive understanding of the features that would materially affect the performance of its exposures.

The Company's due diligence procedures include analyzing and monitoring:

- Information regarding the performance of the underlying credit exposures and relevant market data;
- Structural and other enhancement features that may affect the credit quality of a securitization; and
- Credit profile of the seller/servicer of the assets securitized.

The level of detail included in the due diligence procedures is commensurate with the complexity of each securitization position held. In addition to pre-trade due diligence, the due diligence procedures are also performed on a periodic basis for each securitization position.

Risks

Securitization transactions involve a number of risks including credit risk and seller/servicer risk. Credit risk arises where the underlying assets fail to perform (e.g., payment rates, dilution, write-offs/losses), such that the credit enhancement is insufficient to protect the Company's investment. Seller/servicer risk represents the reliance on the seller and/or servicer of the assets to perform its duties under the securitization agreement and make certain representations and warranties as to the underlying collateral. The risks in the securitization loan portfolio are monitored monthly by comparing performance of assets to the structural requirements. The Company manages these risks (both pre and post commencement of a position) as part of its comprehensive risk management framework, which is described in Truist's Annual Report on Form 10-K for the year ended December 31, 2022 and Quarterly Report on Form 10-Q for the period ended September 30, 2023.

Risk-based capital approach

The Basel III standardized approach requires the application of the SSFA or, if not subject to the Market Risk Rule, the gross-up approach for calculating RWA for securitization exposures. The Company is subject to the Market Risk Rule and, therefore, applies the SSFA to its securitization exposures. A risk weight of 1,250% must be applied to a securitization exposure where the Company does not apply the SSFA.

The SSFA requires the following inputs to calculate regulatory capital:

- Attachment Point: the point at which collateral losses from underlying assets backing a securitization tranche will first be applied to the tranche in the form of principal write-downs;
- Detachment Point: the point at which the tranche will be completely written down as a result of losses from the collateral backing the tranche:
- Weighted Average Capital: the weighted average capital charge for the assets in the securitization;

- Seriously Delinquent: the percentage of underlying collateral that is seriously delinquent (e.g., 90+ days past due, in foreclosure, in bankruptcy); and
- Calibration Parameter: a parameter that increases the riskiness of a tranche for re-securitizations.

The risk-based capital requirement under the SSFA is the exposure amount (including any accrued interest receivable on the exposure) multiplied by the higher of either the calculated risk weight, determined by the inputs listed above, or a 20% risk weight.

Risk-weighted assets for securitization exposures

The following table presents securitization exposures and their applicable risk weighting as of September 30, 2023. There were no amounts of exposures past due and impaired as of September 30, 2023, and no losses were incurred on the exposures during the quarter ended September 30, 2023.

Table 8-1 **Total Securitizations by Risk Weight Category** September 30, 2023

| | Expos | ure | | | |

| Commercial and Industrial | 1,405 | | 1,113 | | 2,518 | 510 |
| Consumer Loans | 2,352 | | 1,546 | | 3,898 | 1,047 |
| Residential Mortgages | 3,753 | | _ | | 3,753 | 751 |
| Other | 3,350 | | 2,594 | | 5,944 | 1,515 |
| Total | \$ 12,163 | \$ | 6,327 | \$ | 18,490 | \$ 4,298 |

Equity Securities Not Subject to Market Risk Rule

The Company holds equity securities for various purposes. The Company's investments in SBIC and other equity-method investments are to provide capital to support small businesses; investments in pension plans are held to reduce future pension expense; investments in affordable housing and renewable energy are made to generate tax credits and investments in certain trade organizations are required to realize the benefits of being a member.

⁽²⁾ For off-balance sheet exposures that use the 1,250% risk-weight, the exposure amount equals the maximum exposure to loss.

The Company has total equity exposures of approximately \$19.5 billion. The Company uses the simple risk-weight approach for its individual equity securities. The Company uses the full look-through approach for BOLI assets in separate accounts and other equity funds, which includes pension fund assets, money market funds and certain other equity funds. Investment guidelines specify objectives and constraints for separate account BOLI investment funds, including permitted and non-permitted investments, concentration and diversification requirements, credit quality requirements, and duration parameters. There were no unrealized gains not recognized through earnings included in Tier 2 capital for the quarter ended September 30, 2023.

Non-marketable equity securities are generally recorded either at historical cost or using the equity method. Refer to "Note 1. Basis of Presentation" in Truist's Annual Report on Form 10-K for the year ended December 31, 2022 for accounting policies related to equity investments and the valuation of financial instruments.

At September 30, 2023, the Company held approximately \$222 million of exposures in equity funds that relate to the Company's nonqualified defined contribution plan. There is an offsetting liability for these investments, and as a result, there is no net impact to earnings or equity from these investments as changes in the fair value of the investments are recorded in income with an offsetting change in personnel expense.

Equity securities carried at cost and the related unrealized gains and losses were immaterial at September 30, 2023.

The following table summarizes the Company's equity securities not subject to the Market Risk Rule:

Table 9-1 **Equity Securities Not Subject to Market Risk Rule** September 30, 2023

| (Dollars in millions) | Ехро | sure | RWA | ital Impact FRWA ⁽¹⁾ |
|----------------------------|------|--------|--------------|------------------------------------|
| 20% risk weight | \$ | 1,284 | \$ 257 | \$ 21 |
| 100% risk weight | | 9,879 | 9,879 | 790 |
| Full look-through approach | | 8,297 | 6,607 | 529 |
| Total | \$ | 19,460 | \$ 16,743 | \$ 1,340 |
| Public | \$ | 8,503 | | |
| Nonpublic | | 10,957 | | |
| Total | \$ | 19,460 | | |

⁽¹⁾ Calculated by multiplying RWA by the minimum total risk-based capital ratio of 8%.

Forward-Looking Statements

This document contains "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995, regarding the financial condition, results of operations. business plans and the future performance of Truist. Words such as "anticipates," "estimates," "expects," "forecasts," "intends," "projects," "may," "will," "should," "would," "could," and other similar expressions are intended to identify these forward-looking statements.

Forward-looking statements are not based on historical facts but instead represent management's expectations and assumptions regarding Truist's business, the economy, and other future conditions. Such statements involve inherent uncertainties, risks, and changes in circumstances that are difficult to predict. As such, Truist's actual results may differ materially from those contemplated by forward-looking statements. While there can be no assurance that any list of risks and uncertainties or risk factors is complete, important factors that could cause actual results to differ materially from those contemplated by forward-looking statements include the following, without limitation, as well as the risks and uncertainties more fully discussed in Part I, Item 1A-Risk Factors in Truist's Form 10-K for the year ended December 31, 2022:

- current and future economic and market conditions, such as the interest rate environment, including the replacement of LIBOR as an interest rate benchmark; U.S. fiscal debt, budget and tax matters; geopolitical matters (including conflicts in the Ukraine, Israel, and the Gaza Strip); and any slow down in global economic growth could result in, among other things, slower deposit or asset growth, a deterioration in credit quality, or a reduced demand for credit, insurance, or other services;
- the monetary and fiscal policies of the federal government and its agencies, including in response to higher inflation, could have a material adverse effect on the economy and Truist's profitability;
- regulatory and supervisory matters, litigation, or other legal actions may result in, among other things, costs, fines, penalties, restrictions on Truist's business activities, reputational harm, negative publicity, or other adverse consequences;
- evolving legislative, accounting standards, regulatory and supervisory standards, including with respect to climate, deposit, capital, liquidity, and long-term debt requirements, which may become more stringent in light of recent turmoil in the banking industry and results of regulatory examinations, which may adversely affect Truist's financial condition and results of operations;
- increased scrutiny regarding Truist's consumer sales practices, training practices, incentive compensation design, and governance could damage its reputation and adversely impact business and revenues;
- Truist may be impacted by actual or perceived soundness of other financial institutions, including as a result of the financial or operational failure of a major financial institution, or concerns about the creditworthiness of such a financial institution or its ability to fulfill its obligations, which can cause substantial and cascading disruption within the financial markets and increased expenses, including FDIC insurance premiums, and could affect our ability to attract and retain depositors and to borrow or raise capital;
- Truist is subject to credit risk by lending or committing to lend money, may have more credit risk and higher credit losses to the extent that loans are concentrated by loan type, industry segment, borrower type or location of the borrower or collateral, and may suffer losses if the value of collateral declines in stressed market conditions;
- inability to access short-term funding or liquidity, loss of client deposits, or changes in Truist's credit ratings could increase the cost of funding, limit access to capital markets, or negatively affect Truist's overall liquidity or capitalization;
- unexpected outflows of uninsured deposits may require Truist to sell investment securities at a loss;
- a loss of value of Truist's investment portfolio could negatively impact market perceptions of Truist and could lead to deposit withdrawals;
- risk management oversight functions may not identify or address risks adequately, and management may not be able to effectively manage credit risk;
- there are risks resulting from the extensive use of models in Truist's business, which may impact decisions made by management and regulators;
- deposit attrition, client loss, or revenue loss following completed mergers or acquisitions may be greater than anticipated;
- Truist could fail to execute on strategic or operational plans, including the ability to achieve its cost saving targets;
- increased competition, including from (i) new or existing competitors that could have greater financial resources or be subject to different regulatory standards or compliance costs, and (ii) products and services offered by non-bank financial technology companies, which may reduce Truist's client base, cause Truist to lower prices for its products and services in order to maintain market share or otherwise adversely impact Truist's businesses or results of operations;
- failure to maintain or enhance Truist's competitive position with respect to new products, services, and technology, whether we fail to anticipate client expectations or because our technological developments fail to perform as desired or do not achieve market acceptance or regulatory approval or for other reasons, may cause Truist to lose market share or incur additional expense:
- negative public opinion could damage Truist's reputation and adversely impact business and revenues, including the effects of social media on market perceptions of Truist and banks generally;
- Truist faces substantial legal and operational risks in safeguarding personal information;
- accounting policies and processes require management to make estimates about matters that are uncertain, including the potential write down to goodwill if there is an elongated period of decline in market value for Truist's stock and adverse economic conditions are sustained over a period of time or if there is a decline in a reporting unit's forecasted net
- Truist faces risks related to originating and selling mortgages, including repurchase and indemnity demands from purchasers related to representations and warranties on loans sold, which could result in an increase in the amount of losses for loan repurchases;
- there are risks relating to Truist's role as a loan servicer, including an increase in the scope or costs of the services Truist is required to perform without any corresponding increase in servicing fees or a breach of Truist's obligations as servicer;
- Truist's success depends on hiring and retaining key teammates, and if these individuals leave or change roles without effective replacements, Truist's operations could be adversely impacted, which could be exacerbated in the increased work-from-home environment as job markets may be less constrained by physical geography;
- Truist's operations rely on its ability, and the ability of key external parties, to maintain appropriate-staffed workforces, and on the competence, trustworthiness, health and safety of teammates:
- Truist faces the risk of fraud or misconduct by internal or external parties, which Truist may not be able to prevent, detect, or mitigate;
- security risks, including denial of service attacks, hacking, social engineering attacks targeting Truist's teammates and clients, malware intrusion, data corruption attempts, system breaches, cyberattacks, which have increased in frequency with geopolitical tensions, identity theft, ransomware attacks, and physical security risks, such as natural disasters, environmental conditions, and intentional acts of destruction, could result in the disclosure of confidential information, adversely affect Truist's business or reputation or create significant legal or financial exposure;
- widespread outages of operational, communication, or other systems, whether internal or provided by third parties, natural or other disasters (including acts of terrorism and pandemics), and the effects of climate change, including physical risks, such as more frequent and intense weather events, and risks related to the transition to a lower carbon economy, such as regulatory or technological changes or shifts in market dynamics or consumer preferences, could have an adverse effect on Truist's financial condition and results of operations, lead to material disruption of Truist's operations or the ability or willingness of clients to access Truist's products and services; and
- the effects of COVID-19 adversely impacted the Company's operations and financial performance and similar adverse impacts resulting from pandemics could occur in future periods.

Readers are cautioned not to place undue reliance on these forward-looking statements, which speak only as of the date they are made. Except to the extent required by applicable law or regulation, Truist undertakes no obligation to revise or update any forward-looking statements.
